

Why I want to become a Software Developer.

Hi, my name is Yauheni Busko and it's my essay on topic "Why I want to become a Software Developer". In today's dynamic environment everything more or less depends on computer systems. From small building automatics systems in your apartment to giant super computers which analyse scientific data (for example in CERN) or store huge amount of data. And all those systems need good programmers to improve their correct functionality. And there are few reasons that will help me to become a good developer.

First of all, it's my skills which I gained during my University studying. AGH university of science and technology is the best technical university in Poland according to the "University Ranking by Academic Performance" (currently 568 place in world ranking). During studying process we learn different areas related to Computer Science like Control Science and Computer Communication. I gained experience in MatLab system, C and C++ programming languages.

Second reason that I gain new knowledge fast and can quickly adapt to new technologies. When I left Belarus I learned Polish in four-month term.

Third reason that I can use my knowledge on practice. I realized different projects during my studies like digital odometer to Cracow Science Days festival or QRS complex detector and many others.

Summarizing those factors and adding my continuing willingness to become better in all areas of my professional life I can conclude that I can become good software developer.
